EDUCATION

Tennessee State University (ABET Accredited) Nashville, TN
Master of Science in Computer Science, Cybersecurity and Networking **GPA: 3.77** Expected May 2028

Tennessee State University (ABET Accredited) Nashville, TN
Bachelor of Science in Computer Science, **GPA: 3.69** Graduated

CERTIFICATIONS AND TECHNICAL SKILLS

Certification: CompTIA Security+ (SY0-701)
Security Compliance and Frameworks: NIST SP 800-53 (control mapping), NIST CSF, STRIDE threat modeling, risk management, vulnerability assessment, audit logging, OWASP Top 10
Languages: Python, Java, PHP, JavaScript, SQL, Bash, PowerShell
Automation and Data Tools: pandas, Scapy, Streamlit, pytest, JUnit 5, Claude, Cursor
Detection and Response: Threat detection, security monitoring, alert triage, incident investigation, MITRE ATT&CK, Windows security events, PCAP analysis, Wireshark, root cause analysis
Secure Development and Access Control: Secure code development, Spring Security, method-level authorization, RBAC, least privilege, separation of duties, row-level security (RLS), BCrypt, IAM, SAST (CodeQL), SCA (Dependabot, OWASP Dependency-Check)
Systems and Tools: Linux, Windows, TCP/IP, VLANs, Cisco IOS, Spring Boot, SQLite, PostgreSQL, Git/GitHub, Jira, Confluence, Agile (Scrum)

CYBERSECURITY PROJECTS AND RESEARCH

Secure Employee Management System (SEMS) Personal Cybersecurity Project
Tech Stack: Java 25, Spring Boot, Spring Security, SQLite, Maven, JUnit 5 Nov. 2026 – Present

- Mapped 13 STRIDE threats to NIST SP 800-53 controls, documenting residual gaps and risk rationale.
- Enforced least privilege for 3 roles using URL rules, method-level @PreAuthorize, and separation of duties in the leave workflow.
- Implemented AC-7 account lockout (5 failures, 15 min), salted BCrypt, CSRF protection, and generic login errors to prevent account enumeration.
- Built an admin-only audit log that excludes passwords and session IDs.
- Wrote 41 JUnit 5 tests (0 failures) covering authentication, RBAC, lockout, workflow rules, and audit logging; used Claude and Cursor to speed up generation, then reviewed against the threat model.
- Ran CodeQL, Dependabot, and OWASP Dependency-Check; fixed a High-severity ReDoS finding and cut dependency CVEs from 61 to 34.

NetWatch – Network Traffic & System Event Monitoring Personal Cybersecurity Project
Technologies: Python, Scapy, SQLite, pandas, Streamlit Oct. 2026 – Present

- Built a 5-page Streamlit dashboard correlating up to 100,000 PCAP packets with Windows events from 4 log channels (Security, System, Application, Sysmon).
- Produced evidence-linked alerts with status tracking and related-row drill-down for triage.
- Mapped 3 tunable detection rules to MITRE ATT&CK (T1110.001, T1046): 5 failed logons/300 s, 15 SYN ports/60 s, 3x volume spike.
- Validated with 58 pytest tests on seeded data (800 packets, 80 events); documented detection gaps in a STRIDE threat model.
- Used Claude and Cursor to accelerate pytest generation, validating coverage against seeded data and detection rules.

Software Supply Chain Security Research | Faculty-Supervised Project Tennessee State University
Focus: Third-Party Risk, SBOMs, AI Model Security Sept. 2026 – Present

- Presented 4 research briefs on supply-chain risk: open-source attacks (Log4Shell, event-stream, xz), runtime SBOMs, malicious AI models, and expert-based risk prioritization (DEMATEL).
- Analyzed MEM-SBOM (*Computers & Security*), which reported 10 loaded-vs-installed version mismatches across 51 Python apps and 83.3% fewer false-positive vulnerability reports in one case study.

WORK EXPERIENCE

BECO Holdings Incorporated – Remote Nashville, TN
Software Engineer Intern Jul. 2026 – Present

- Executed 20+ security test cases on Stripe payment flows and database row-level security policies, validating access controls, duplicate-transaction handling, refunds, and transaction integrity, with results documented as testing evidence.
- Verified secure payment workflows end to end across mobile apps, Stripe, and backend databases.
- Developed and maintained full-stack PHP applications for 3 government, healthcare, and education clients.

The Blount Group LLC – Remote Memphis, TN
Technology Systems and Automation Intern Jan. 2026 – Jul. 2026

- Tested an AI voice agent that answers client calls 24/7 and books consultations via Google Calendar; caught and reported a time-zone bug that offered wrong times and booked the wrong hour.
- Built a full-stack PHP website via cPanel for a health and life insurance agency, delivering frontend and backend functionality.

American Honda Motor Company, Incorporated Torrance, CA
Mobile Web and Product Development Co-op Jun. 2025 – Aug. 2025

- Identified and escalated delivery risks on a ROAM board during PI Planning for an Agile (Scrum) team, supporting risk-based planning.
- Documented user stories in Confluence, tracked work in Jira, and validated the mobile app against Figma designs with QA.

Music City Center Nashville, TN
Network Technician I Jul. 2024 – May 2025

- Configured, maintained, and troubleshot 50 enterprise Cisco switches plus routers across 3 VLANs, supporting 50+ events.
- Resolved 20+ network tickets and outages per week through root cause analysis of TCP/IP, port, and protocol faults.
